Summary

Hi, I'm a developer who began my journey in 2017, initially as a Web developer. Since 2020, specializing as a back-end Node.js developer.

I am passionate about professional growth, exploring new technologies, and contributing to exciting projects alongside a talented team.

Main Technologies

Back-end

- Node.js (Nest.js)
- Databases (PostgreSQL, MySQL, MongoDB)
- ORMs (TypeORM, Prisma, Sequelize)

Front-end

- React.js
- React-native
- Vue.js
- Firebase
- Ionic (Mobile hybrid apps)

Experience

Back-end Node.js developer - 03/2021 – Present

Ein-des-ein, remote

I had a great experience working on several interesting projects, which led to the creation of a **boilerplate** own template for quickly implementing already project with featuring modules for authentication, user management, files uploading, chats, and push-notifications, ... etc.

Couple of projects:

- Mobile Fitness App with admin panel

The core feature of the app is paid courses, which include weight loss lessons and quizzes. **For payment processing, Digistore24** was integrated, enabling users to purchase courses and access monthly subscriptions for exclusive recipes.

In the admin panel, the **Edamam API** was implemented to automatically calculate calories and other nutritional information for ingredients. The app also includes social features, allowing users to create posts and stories, like and comment, and engage in group chats, enhancing the community experience.

- Analytics social network platform

The project has a functional of social network: feed, chat, friends and feedbacks. But the main idea is to analyze statistics of users' social networks, then other company can compare these statistics to promote their products by influencer.

So, from an interesting experience, I worked and researched with **Facebook and Instagram API**, to implement auth flow, and collect insights data for graphics.

- Social network with streaming functionality for artists

The project has a huge social network functional with many users roles and admin panel. The base idea is, artists, set their workdays schedule to make online public or private events with some price.

My non-standard and interesting experience was with difficult SQL queries to business logic for workdays in the calendar with repeat slots, **FFmpeg** lib for crop, create short videos. Also personal, group chats by socket.io, notification module by email, and push notification, which triggered with different events and time.

- Document sign platform

It's similar to e-sign platforms, where users can upload documents and select signers. Also, there are chat, mail, push notifications

Back-end Node.js developer - 08/2020 – 01/2021

ITTEAM, remote

Developed server for the social-event app, which shows events around you.

- Worked with a team of 10 people, developers, QA, PM.
- Built CI/CD pipelines, Docker and custom scripts for deploy.
- Developed REST API Nest.js server with Swagger documentation.
- Used external services like Firebase and others for implement user authorization, push notifications & email notifications.
- System and database architecture development.

Full stack developer - 05/2019 – 02/2020

SPDeveloper, office

- Implemented REST API server using Node.js.
- Designed and constructed web user interfaces and visual elements using Vue.js.
- Developed full functionality dynamic and interactive websites using frameworks.

Front-end developer - 08/2017 – 04/2019

FlyFox, remote

- Developed full functionality dynamic and interactive websites using WordPress & frameworks.
- Fixed bugs from existing websites and performance.

Education

Software Development - 2022 – 2023

Master of Science in Software Development
Ivano-Frankivsk National Technical University of Oil and Gas

Software Development - 2019 – 2022

Bachelor of Science in Software Development
Ivano-Frankivsk National Technical University of Oil and Gas

Software Development - 2015 – 2019

College of Electronic Devices
Ivano-Frankivsk National Technical University of Oil and Gas
